

# Swaks - Swiss Army Knife for SMTP

---

## About

Swaks is a featureful, flexible, scriptable, transaction-oriented SMTP test tool written and maintained by [John Jetmore](#). Features include:

- SMTP extensions including TLS, authentication, pipelining, and XCLIENT
  - Protocols including SMTP, ESMTP, and LMTP
  - Transports including unix-domain sockets, internet-domain sockets (IPv4 and IPv6), and pipes to spawned processes
  - Completely scriptable configuration, with option specification via environment variables, configuration files, and command line
- 

## Download

The latest version of Swaks is **20170101.0**, which can be downloaded as a [package](#) or a [standalone script](#).

There is also a [versions page](#) which lists every released version of Swaks, complete with changelogs and download links.

---

## Documentation

The [reference documentation](#) from the latest release, which includes quick-start examples, is available. There is also an [Occasionally Asked Questions](#) document.
